## Consultant Sustainability Projects

Are you looking to work on projects related to sustainable food supply chains and agricultural production? Do you have experience with Life Cycle Assessments (LCA) and do you get excited about sustainability software and data(base) solutions? Blonk Sustainability Tools is looking for a Consultant Sustainability Projects, who will start immediately on a variety of projects in the dynamic environment of sustainable food and agricultural production. The successful candidate is leading and executing projects related to our software and data solutions for managing environmental footprinting at leading companies. We are looking for an energetic and persuasive consultant with a focus on quality and client service who generates innovative solutions and works towards results.

### What will you be doing?

As a consultant within Blonk Sustainability Tools you will translate customer needs into meaningful projects, integrating our software and data solutions. With our customers you will develop and execute tailor-made projects, interacting with their team and our enthusiastic and growing team of software developers, data & model specialist and consultants. At Blonk Sustainability Tools we are developing a broad range of (tailor-made) tools to empower our customers to manage their road to more sustainable production, products and services. Examples are [APS-footprint](#), our LCA software solution for animal production systems, [Agri-footprint](#), our international database for agri-food commodities and [Optimeal](#), optimization software to define healthy and sustainable food patterns. At Blonk Sustainability Tools you will work in varying project teams within an easy-going office atmosphere.

### Your profile:

- Completed university education in a scientific or engineering subject with a sustainability component (e.g. energy sciences, industrial ecology, sustainable energy technology, environmental science)
- 2 – 5 years work experience in a relevant field
- Commitment to sustainability
- Strong analytical skills
- Advanced knowledge of LCA
- Excellent project management skills
- Affinity with data science and quantitative science
- Ability to understand client processes and make the connection with consultancy & IT-processes
- Good report writing skills
- Good communication skills in English
- A focus on quality

### Bonus points:

- Experience with LCA studies of agricultural products
- Experience with programming and/or data management
- A good command of Dutch, German and/or French language

## What's in it for you?

- Contribute to a more sustainable society
- Plenty of room for own initiative and personal development
- Varying project teams in a stimulating working environment
- A contract for 32–40 hours per week
- Become part of an enthusiastic and growing team of young professionals

## About Blonk Sustainability Tools

Transparency and accurate information provide the essential basis for making the agri-food sector and society more sustainable and healthier. To support organisations to assess their environmental impact in an effortless and consistent way we launched Blonk Sustainability Tools, the software development branch of Blonk Consultants. Our enthusiastic and growing team develops smart software solutions and (LCA) databases. The core of all our tools is formed by standardized and international calculation rules and consistent background data and benchmarks – all based on many years' experience in the field.
